

# Native Cabin Grass Mix

granite  
**SEED**  
and erosion control

## Is the natural look right for your yard or garden?

Granite Seed Company's Native Cabin Grass Mix provides a beautifully naturalistic look to your home or cabin. This combination of 7 montane grasses native to the Intermountain West have been selected for their heat and drought tolerance, as well as their beautiful appearance. These grasses are adapted to mountain elevations with greater than 15 inches of annual precipitation. This grass mix is perfect for your cabin or recreation property without any irrigation. You can also plant it for your home and garden in drier sites with supplemental watering. The Cabin Grass Mix is not intended to be a maintained turfgrass lawn, but to create the appearance of a natural meadow. Use the Cabin Grass Mix alone, or in combination with one of our Regional Wildflower Mixes to create a naturalistic cottage garden and bring beneficial insects and pollinators to your home and garden.

### Cabin Grass Species:

- Mt. Bromegrass
- Slender Wheatgrass
- Western Wheatgrass
- Idaho Fescue
- Sandberg Bluegrass
- Big Bluegrass
- Bluebunch Wheatgrass

*Apply at 1 lb/1,000 ft<sup>2</sup> (25 lbs/acre) using a broadcast or drop spreader. These native grasses will take up to 2 full growing seasons to fully establish, but they are long lived given proper light and water.*
